

Novabrain deployment details

Client Side

- System requirements
 - Windows XP, Vista, Windows7
 - 1 Ghz CPU, 512 MB RAM
 - Size on disk at install : 25 MB
 - .Net 2.0
 - IFilters are required to parse documents if running local indexing
- Installation in Windows profile (per user) or for all users
- Authentication using Windows logon

Server Side

- System requirements
 - Windows Server 2000, 2003, 2008
 - 1 Ghz CPU, 1GB RAM
 - Memory req. for indexer ~ 100MB / 100K documents
 - Size on disk at install : 25 MB
 - .Net 2.0
 - IFilters are required to parse documents with the indexer
 - Port 9680 open for TCP
- Server side is optional
- Run the indexer engine and virtual database engine centrally to minimize network crawling from each client and to centralize IFilters installation
- Running as a Service
- Authentication when running as a Service is SYSTEM by default. Can be configured with any Windows account

Installation and Activation

- MSI downloadable from your account page on Novabrain website
- Default install is per user with popup box for activation
- Default activation provided by a webservice. Internet connection is required
- Can be installed for ALLUSERS (msiexec parameter)
- Can be installed and activated using GP (Group Policies) in AD.
- Can be installed and activated with scripts using registry for activation

Application update

- Default: menu Help - check for updates (menu can be disabled)
- Will use webservice to install new version if required
- Application can be updated using scripts or GP

Communication channel for client-server

- .Net Remoting over TCP using binary formatter (TCP port 9680 must be open)
- No document content is transported through the channel
- Client side is parsing results and accessing documents using its own Windows logon authentication

Data format, size and repository

- Data is stored as native files in Windows folders
- Existing files (documents, images, presentation, emails, etc...) are not migrated or converted
- Record information is written in standard W3C XML format
- Size of repository for documents is not modified in any way (i.e. it is the size of your share drive content)
- Size of Records on disk is approx 5MB / 1000 records
